### 3. PRESENTATION OF DISCONTINUED 1962 CLASSES IN 1963 QUARTERLY REPORTS

All of the 1962 classes which were discontinued in January, 1963, have been re-numbered for presentation in this quarterly report. The re-numbering technique was designed to transfer the 1962 discontinued classes to the same part of the import statistical classification as includes their content in 1963, and thereby facilitate the comparison of trade in 1962 and 1963. Whenever the content of one or more discontinued classes closely approximated the content of a new 1963 class (or of a 1963 class whose content had been altered), they were re-numbered with the appropriate class code. In cases where individual class comparisons could not be made, it was often possible to group together several discontinued 1962 classes using either the "n.o.p." code of a new sub-group or an artificial or "dummy" code located in the proper group.

The re-numbering of discontinued 1962 classes often resulted in their transfer from one main group to another. As a result the main group totals for 1962 trade with the United Kingdom and the United States which appear in Table 2 of this report do not match the totals originally compiled on the basis of the 1962 classification and still published in 1963 issues of other Trade of Canada reports. It will not be possible to adjust these totals in other reports until Volume III of the annual trade report for 1963-64 is processed.

The following table shows the class number under which totals for discontinued 1962 classes are presented in the 1962 columns of this report together with the new 1963 classes which have no 1962 class comparison and six artificial or "dummy" classes (noted with a "d") for which 1963 figures are not compiled (1963 classes); the 1962 class numbers included in each case (1962 classes included); and an alphabetic code and footnote reference, if necessary, on the quality of the resulting comparison (Notes). In the alphabetic code "a" indicates full comparability with 1963 trade statistics; "b" near comparability (usually about 90% the same as 1963 totals) and "c" no comparison or poor comparability as indicated in footnotes.

Total Imports by Countries .....	3

## EXPLANATORY NOTES

1. **Source of Data.** Statistics of imports are based upon the declarations of importers (import entries) as subsequently checked by customs officials.
2. **Valuation.** The value of goods imported is usually the value as determined for customs duty purposes. In most cases this corresponds to the value shown on the invoice accompanying the goods, converted to Canadian dollars at authorized exchange rates (usually the commercial rate prevailing at the date on which the goods were actually dispatched to Canada), and excluding such charges as freight, insurance, handling and taxes. In effect, therefore, import values are taken f.o.b. point of shipment in the country of export.

Effective with statistics for January, 1959, the statistical value of imports on which dumping duty has been collected is considered to be the value of the goods as declared by the importer (i.e. the value for duty less the amount of dumping duty). This change in procedure is to conform with the principle that trade statistics should show, whenever possible, the actual amount paid for imports. Previously the statistical value of such imports was considered to be the value for duty.

3. **Units of Quantity.** Weight, where shown, is the net weight of the goods, excluding the weight of such packing as is required for shipment, except in certain special cases otherwise defined in the Customs Tariff. The expression "ton" means 2,000 pounds, and "cwt." 100 pounds, avoirdupois. Where other units of quantity are used, Imperial standards apply.

In this report are statistical classes such as "lawn mowers, power, and parts" which show a quantity in "number" and a value. In these classes the "number" refers only to the number of substantially complete units imported, while the value includes also the value of any parts of the commodity imported. For such classes the average value per unit cannot be ascertained.

4. **Coverage.** Statistics of imports include substantially all goods which enter Canada and are cleared by customs officials for domestic sale or use. The series therefore includes goods which are cleared by customs immediately on entry into the country, and goods cleared out of customs warehouses; but excludes goods placed in customs warehouses on entering the country. The technical phrase "Imports entered for consumption" which is sometimes used to describe Canadian import statistics does not imply that all imports will actually be consumed in Canada, but only that they are free to be so consumed without further customs formalities.
5. **Exclusions.** Import statistics exclude gold and current coin, which are shown in "Special Transactions-Non-Trade", but include gold products where the value of the gold content is less than 80% of the value of the commodity. A small amount of gold scrap in the form of jewellers' sweepings is also included. Other important exclusions are goods for the use of United States forces stationed at treaty bases in Canada, ships of British construction and registry imported for use in Canada, ships purchased for use in foreign trade, bunker supplies and ships' stores purchased by Canadian vessels abroad, temporary imports for exhibition or competition, Canadian-owned military equipment returned to Canada, and, from January 1, 1960, goods imported for foreign armed forces or diplomats stationed in Canada, settlers' effects, private donations and gifts, and tourist purchases exempt from duty (see blue pages of the January-March 1960, issue of this report).
6. **Countries Credited.** Imports are usually credited to the country from which the goods were consigned to Canada. The country of consignment is the country from which goods have come to Canada without interruption of transit except in the course of transfer from one means of conveyance to another.

An exception to this rule is made in the case of imports of goods originating in Central or South America (including the Antilles and Bermuda) which are consigned to Canada from the United States. These imports are credited to the country in which the goods originated.

7. **Time Periods.** Import statistics for any month include all goods declared on import entries received at the Bureau of Statistics during the calendar month in question.
8. **Abbreviations.** Many descriptions of countries and commodities used in this report are abbreviated or incomplete because of mechanical limitations. Full descriptions of all commodities appear in Volume III of the annual report "Trade of Canada". The letters "N.O.P." mean "not otherwise provided for", "N.E.S.", "not elsewhere specified".
9. **Revisions.** All statistics in this report are subject to revision. Revisions to previous reports are published on the coloured pages at the beginning of each monthly report.

## EXPLANATORY NOTES

1. **Source of Data.** Statistics of imports are based upon the declarations of importers (import entries) as subsequently checked by customs officials.
2. **Valuation.** The value of goods imported is usually the value as determined for customs duty purposes. In most cases this corresponds to the value shown on the invoice accompanying the goods, converted to Canadian dollars at authorized exchange rates (usually the commercial rate prevailing at the date on which the goods were actually dispatched to Canada), and excluding such charges as freight, insurance, handling and taxes. In effect, therefore, import values are taken f.o.b. point of shipment in the country of export.

Effective with statistics for January, 1959, the statistical value of imports on which dumping duty has been collected is considered to be the value of the goods as declared by the importer (i.e. the value for duty less the amount of dumping duty). This change in procedure is to conform with the principle that trade statistics should show, whenever possible, the actual amount paid for imports. Previously the statistical value of such imports was considered to be the value for duty.

3. **Units of Quantity.** Weight, where shown, is the net weight of the goods, excluding the weight of such packing as is required for shipment, except in certain special cases otherwise defined in the Customs Tariff. The expression "ton" means 2,000 pounds, and "cwt." 100 pounds, avoirdupois. Where other units of quantity are used, Imperial standards apply.

In this report are statistical classes such as "lawn mowers, power, and parts" which show a quantity in "number" and a value. In these classes the "number" refers only to the number of substantially complete units imported, while the value includes also the value of any parts of the commodity imported. For such classes the average value per unit cannot be ascertained.

4. **Coverage.** Statistics of imports include substantially all goods which enter Canada and are cleared by customs officials for domestic sale or use. The series therefore includes goods which are cleared by customs immediately on entry into the country, and goods cleared out of customs warehouses; but excludes goods placed in customs warehouses on entering the country. The technical phrase "Imports entered for consumption" which is sometimes used to describe Canadian import statistics does not imply that all imports will actually be consumed in Canada, but only that they are free to be so consumed without further customs formalities.
5. **Exclusions.** Import statistics exclude gold and current coin, which are shown in "Special Transactions-Non-Trade", but include gold products where the value of the gold content is less than 80% of the value of the commodity. A small amount of gold scrap in the form of jewellers' sweepings is also included. Other important exclusions are goods for the use of United States forces stationed at treaty bases in Canada, ships of British construction and registry imported for use in Canada, ships purchased for use in foreign trade, bunker supplies and ships' stores purchased by Canadian vessels abroad, temporary imports for exhibition or competition, Canadian-owned military equipment returned to Canada, and, from January 1, 1960, goods imported for foreign armed forces or diplomats stationed in Canada, settlers' effects, private donations and gifts, and tourist purchases exempt from duty (see blue pages of the January-March 1960, issue of this report).
6. **Countries Credited.** Imports are usually credited to the country from which the goods were consigned to Canada. The country of consignment is the country from which goods have come to Canada without interruption of transit except in the course of transfer from one means of conveyance to another.

An exception to this rule is made in the case of imports of goods originating in Central or South America (including the Antilles and Bermuda) which are consigned to Canada from the United States. These imports are credited to the country in which the goods originated.

7. **Time Periods.** Import statistics for any month include all goods declared on import entries received at the Bureau of Statistics during the calendar month in question.
8. **Abbreviations.** Many descriptions of countries and commodities used in this report are abbreviated or incomplete because of mechanical limitations. Full descriptions of all commodities appear in Volume III of the annual report "Trade of Canada". The letters "N.O.P." mean "not otherwise provided for", "N.E.S.", "not elsewhere specified".
9. **Revisions.** All statistics in this report are subject to revision. Revisions to previous reports are published on the coloured pages at the beginning of each monthly report.

## EXPLANATORY NOTES

1. **Source of Data.** Statistics of imports are based upon the declarations of importers (import entries) as subsequently checked by customs officials.
2. **Valuation.** The value of goods imported is usually the value as determined for customs duty purposes. In most cases this corresponds to the value shown on the invoice accompanying the goods, converted to Canadian dollars at authorized exchange rates (usually the commercial rate prevailing at the date on which the goods were actually dispatched to Canada), and excluding such charges as freight, insurance, handling and taxes. In effect, therefore, import values are taken f.o.b. point of shipment in the country of export.

Effective with statistics for January, 1959, the statistical value of imports on which dumping duty has been collected is considered to be the value of the goods as declared by the importer (i.e. the value for duty less the amount of dumping duty). This change in procedure is to conform with the principle that trade statistics should show, whenever possible, the actual amount paid for imports. Previously the statistical value of such imports was considered to be the value for duty.
3. **Units of Quantity.** Weight, where shown, is the net weight of the goods, excluding the weight of such packing as is required for shipment, except in certain special cases otherwise defined in the Customs Tariff. The expression "ton" means 2,000 pounds, and "cwt." 100 pounds, avoirdupois. Where other units of quantity are used, Imperial standards apply.

In this report are statistical classes such as "lawn mowers, power, and parts" which show a quantity in "number" and a value. In these classes the "number" refers only to the number of substantially complete units imported, while the value includes also the value of any parts of the commodity imported. For such classes the average value per unit cannot be ascertained.
4. **Coverage.** Statistics of imports include substantially all goods which enter Canada and are cleared by customs officials for domestic sale or use. The series therefore includes goods which are cleared by customs immediately on entry into the country, and goods cleared out of customs warehouses; but excludes goods placed in customs warehouses on entering the country. The technical phrase "Imports entered for consumption" which is sometimes used to describe Canadian import statistics does not imply that all imports will actually be consumed in Canada, but only that they are free to be so consumed without further customs formalities.
5. **Exclusions.** Import statistics exclude gold and current coin, which are shown in "Special Transactions-Non-Trade", but include gold products where the value of the gold content is less than 80% of the value of the commodity. A small amount of gold scrap in the form of jewellers' sweepings is also included. Other important exclusions are goods for the use of United States forces stationed at treaty bases in Canada, ships of British construction and registry imported for use in Canada, ships purchased for use in foreign trade, bunker supplies and ships' stores purchased by Canadian vessels abroad, temporary imports for exhibition or competition, Canadian-owned military equipment returned to Canada, and, from January 1, 1960, goods imported for foreign armed forces or diplomats stationed in Canada, settlers' effects, private donations and gifts, and tourist purchases exempt from duty (see blue pages of the January-March 1960, Issue of this report).
6. **Countries Credited.** Imports are usually credited to the country from which the goods were consigned to Canada. The country of consignment is the country from which goods have come to Canada without interruption of transit except in the course of transfer from one means of conveyance to another.

An exception to this rule is made in the case of imports of goods originating in Central or South America (including the Antilles and Bermuda) which are consigned to Canada from the United States. These imports are credited to the country in which the goods originated.
7. **Time Periods.** Import statistics for any month include all goods declared on import entries received at the Bureau of Statistics during the calendar month in question.
8. **Abbreviations.** Many descriptions of countries and commodities used in this report are abbreviated or incomplete because of mechanical limitations. Full descriptions of all commodities appear in Volume III of the annual report "Trade of Canada". The letters "N.O.P." mean "not otherwise provided for", "N.E.S.", "not elsewhere specified".
9. **Revisions.** All statistics in this report are subject to revision. Revisions to previous reports are published on the coloured pages at the beginning of each monthly report.

NEW IMPORT COMMODITY CLASSIFICATION EFFECTIVE JANUARY 1, 1964

Beginning January 1964, import statistics will be compiled and published using a new Import Commodity Classification. The January-March, 1964 issue of this report will probably not be available before October and may be later than that. Other import reports will be similarly delayed. The timeliness of import statistics is unlikely to be fully restored before the middle of 1965.

The new Import Commodity Classification is based on the Standard Commodity Classification (Catalogue No. 12-502) which was developed in the Dominion Bureau of Statistics as a tool for integrating commodity statistics derived from various sources. The old Statistical Classification of imports grouped commodities into nine major groups according to their principal component material, but since its introduction in 1919 it has become increasingly difficult to accommodate complex commodities within this framework. The new classification groups commodities primarily according to stage of fabrication and purpose into seven "Sections" as follows:

<u>Section</u>	<u>Title</u>	<u>Class Numbers</u>	<u>No. of Classes</u>
I	Live Animals .....	1-19 to 9-99	14
II	Food, Feed, Beverages and Tobacco ...	11-09 to 183-99	312
III	Crude Materials, Inedible .....	201-10 to 291-99	152
IV	Fabricated Materials, Inedible .....	301-10 to 496-99	933
V	End Products, Inedible .....	501-19 to 961-99	956
VI	Special Transactions - Trade .....	970-10 to 970-99	5
VII	Special Transactions - Non-Trade ....	990-05 to 995-89	<u>11</u>
			2,383

Sections I to V of the Import Commodity Classification are defined exactly as in the Standard Commodity Classification (Catalogue No. 12-502) and almost all the Divisions and many groups and items of the Standard Commodity Classification are duplicated in the Import Commodity Classification.

Section VI is reserved for special transactions of a type not usually encountered in other statistical work but which are properly included in totals of Canadian trade. The components of this section are import packing, returned goods and certain other unclassifiable imports.

Section VII (not included in this report) is reserved for special transactions of a type not properly included in totals of Canadian trade but for which records must be kept and published. This section is identical with Group X of the former classification and was described in some detail in the blue page insert of the January-March 1960 issue of this report.

After the introduction of the new Import Commodity Classification, users of export and import statistics will find an especially close relation between the classifications used for these series. All the Sections, almost all the Divisions and many groups and classes will be identical in both import and export statistics.

A more detailed description of the new Import Commodity Classification appears in the introductory pages of the classification itself which may be secured on request to the Publications Distribution Unit by subscribers to Imports by Countries (Catalogue No. 65-006). It will be distributed automatically to subscribers to Imports by Commodities (Catalogue No. 65-007). This will permit subscribers to examine the new classification before encountering statistics based on it. Persons who wish to obtain copies of the new Import Commodity Classification and are not subscribers to monthly report 65-007 or quarterly report 65-006, and subscribers who wish to secure additional copies, may purchase them from the Publications Distribution Unit of the Dominion Bureau of Statistics at \$5.00 a copy.

It is not intended that the Import Commodity Classification will remain static; a regular programme of revision and up-dating will be introduced along with the classification. All those who secure copies of the classification will automatically be placed on a mailing list to receive a reprint and revision service to keep the classification up to date. A summary index for this classification is planned and this, also, will be distributed free of charge to all recipients of the classification.

As part of the change-over to the new classification the commodity detail shown in import statistics will be modernized by eliminating statistics on many commodities now of minor significance and instituting new classes for commodities which have become more important. Some of this modernization has been undertaken over the past several years during which time no changes to the old classification were made which did not relate to the concepts of the new classification.

Although a new commodity classification will be used, the formats in which import statistics will appear will be basically unchanged. Imports by Countries (Catalogue No. 65-006) will continue to present import statistics for both the current and the preceding year on a country-by-commodity basis; summary tables for imports by countries and geographic areas will continue to be published. Imports by Commodities (Catalogue No. 65-007) will continue to present statistics on a commodity-by-country basis with summary tables being presented for imports from principal sources by sections of the new classification and by main group totals of the old classification. This latter summary table will continue for at least a year but detail within the old groupings will not be available.

Other import reports prepared by the External Trade Division will be affected to varying degrees by the introduction of the Import Commodity Classification. The annual report Trade of Canada, Volume III - Imports (Catalogue No. 65-203) will present commodity detail on the basis of the new classification. The monthly bulletin Summary of Imports (Catalogue No. 65-005) will continue to present summaries of Canadian imports according to the old classification so that users may make comparisons with previous years. In addition a summary table by Sections of the new classification will be provided.

Further notes on the use of the new classification will appear in future issues of this report.

Total Imports by Countries .....	

## EXPLANATORY NOTES

1. **Source of Data.** Statistics of imports are based upon the declarations of importers (import entries) as subsequently checked by customs officials.
2. **Valuation.** The value of goods imported is usually the value as determined for customs duty purposes. In most cases this corresponds to the value shown on the invoice accompanying the goods, converted to Canadian dollars at authorized exchange rates (usually the commercial rate prevailing at the date on which the goods were actually dispatched to Canada), and excluding such charges as freight, insurance, handling and taxes. In effect, therefore, import values are taken f.o.b. point of shipment in the country of export.

Effective with statistics for January, 1959, the statistical value of imports on which dumping duty has been collected is considered to be the value of the goods as declared by the importer (i.e. the value for duty less the amount of dumping duty). This change in procedure is to conform with the principle that trade statistics should show, whenever possible, the actual amount paid for imports. Previously the statistical value of such imports was considered to be the value for duty.

3. **Units of Quantity.** Weight, where shown, is the net weight of the goods, excluding the weight of such packing as is required for shipment, except in certain special cases otherwise defined in the Customs Tariff. The expression "ton" means 2,000 pounds, and "cwt." 100 pounds, avoirdupois. Where other units of quantity are used, Imperial standards apply.

In this report are statistical classes such as "lawn mowers, power, and parts" which show a quantity in "number" and a value. In these classes the "number" refers only to the number of substantially complete units imported, while the value includes also the value of any parts of the commodity imported. For such classes the average value per unit cannot be ascertained.

4. **Coverage.** Statistics of imports include substantially all goods which enter Canada and are cleared by customs officials for domestic sale or use. The series therefore includes goods which are cleared by customs immediately on entry into the country, and goods cleared out of customs warehouses; but excludes goods placed in customs warehouses on entering the country. The technical phrase "Imports entered for consumption" which is sometimes used to describe Canadian import statistics does not imply that all imports will actually be consumed in Canada, but only that they are free to be so consumed without further customs formalities.
5. **Exclusions.** Import statistics exclude gold and current coin, which are shown in "Special Transactions-Non-Trade", but include gold products where the value of the gold content is less than 80% of the value of the commodity. A small amount of gold scrap in the form of jewellers' sweepings is also included. Other important exclusions are goods for the use of United States forces stationed at treaty bases in Canada, ships of British construction and registry imported for use in Canada, ships purchased for use in foreign trade, bunker supplies and ships' stores purchased by Canadian vessels abroad, temporary imports for exhibition or competition, Canadian-owned military equipment returned to Canada, and, from January 1, 1960, goods imported for foreign armed forces or diplomats stationed in Canada, settlers' effects, private donations and gifts, and tourist purchases exempt from duty (see blue pages of the January-March 1960, issue of this report).
6. **Countries Credited.** Imports are usually credited to the country from which the goods were consigned to Canada. The country of consignment is the country from which goods have come to Canada without interruption of transit except in the course of transfer from one means of conveyance to another.

An exception to this rule is made in the case of imports of goods originating in Central or South America (including the Antilles and Bermuda) which are consigned to Canada from the United States. These imports are credited to the country in which the goods originated.
7. **Time Periods.** Import statistics for any month include all goods declared on import entries received at the Bureau of Statistics during the calendar month in question.
8. **Abbreviations.** Many descriptions of countries and commodities used in this report are abbreviated or incomplete because of mechanical limitations. Full descriptions of all commodities appear in Volume III of the annual report "Trade of Canada". The letters "N.O.P." mean "not otherwise provided for", "N.E.S.", "not elsewhere specified".
9. **Revisions.** All statistics in this report are subject to revision. Revisions to previous reports are published on the coloured pages at the beginning of each monthly report.
